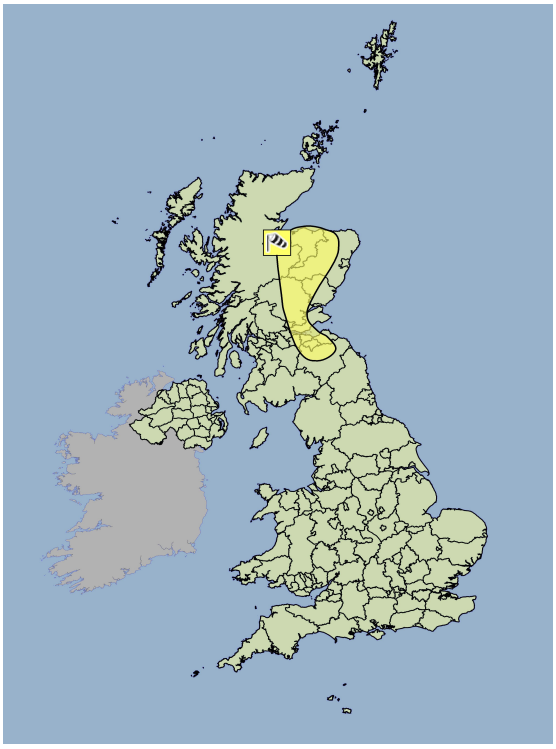
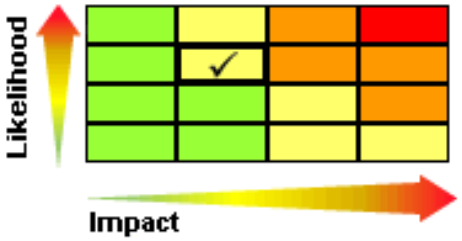
National Severe Weather Warning Service





Chief Forecasters Assessment
Though windy weather will continue to affect much of Scotland, on Wednesday night atmospheric conditions will become particularly conducive to producing very strong wind gusts over and to the lee of high ground in eastern Scotland. These gusts may be highly localised, but have potential to cause some minor disruption, especially to transport, until winds begin to ease during Thursday morning.

The Met Office have issued a **Yellow Warning** of **Wind**

Valid from **00:00 on Thu, 12th Dec 2013** until **09:00 on Thu, 12th Dec 2013**

Strong and gusty southerly winds are expected on Thursday morning. Isolated gusts of 60 to 70 mph are possible across parts of eastern Scotland. The public should be aware that this may cause very localised disruption to travel, with problems for high sided vehicles on prone routes.
